

Build It Yourself: Solar Powered Ornamental Garden Light Pylon (Creations Project Series Book 2)

This book is the second in the Creations Project Series of home and garden Build It Yourself projects. The Creations Project Series will guide the reader through building a crafts project by hand. The Project Series offers commentary and instruction for the novice beginner but at the same time the project plan can be used by a more experienced woodworker with more refined tools and skills. In this volume we create a pier piling styled multi-post pylon topped with a solar powered light and two or more figures or ornaments to add accent to your yard of garden. You can find these at fairs and crafts shows for upwards of \$50 or more, or you can build them yourself for less than \$10 each. The author started making these pylons when one day at a county fair his wife saw one for sale and wanted to buy one. He kept her from spending what he considered an extreme amount of money by convincing her that he could build one for much less and themed more to her liking. That Christmas she had make 10 or twelve to give as Christmas presents to friends and relatives.
